DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114 was filed in this application after appeal to the Board of Patent Appeals and Interferences, but prior to a decision on the appeal. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on Applicant's submission filed on 1/18/2011 has been entered.

2. The texts of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on 1/16/2009.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bryan Nese on 2/7/11. The amendment was also confirmed via a fax received from Bryan Nese on 2/7/11.

4. The application has been amended as follows:

Art Unit: 1795

Amend claims 1, 2, 5 and 8 to recite the following:

1. (Currently Amended) A fuel cell system comprising:
 - a fuel cell;
 - an electric power storing device;
 - an electric power supplying device ~~for supplying~~ configured to supply electric power to a load from the fuel cell and the electric power storing device; and
 - a threshold value adjusting device ~~for adjusting~~ configured to adjust a reference value according to an internal electromotive voltage of the fuel cell, such that the reference value decreases as the internal electromotive voltage of the fuel cell, when stopped, decreases,wherein the electric power supplying device includes intermittent operation device ~~for stopping~~ configured to stop operation of the fuel cell when a driving power required by the load is smaller than the reference value, and configured to start ~~start~~ the stopped operation of the fuel cell when the driving power required by the load is equal to or larger than the reference value.
2. (Currently Amended) The fuel cell system according to claim 1, wherein
 - the threshold value adjusting device decreases the reference value according to a decrease in the internal electromotive force in the fuel cell such that a wait time at which the operation of the fuel cell is started is decreased ~~relatively advanced~~.

Art Unit: 1795

5. (Currently Amended) The fuel cell system according to claim 4, wherein the threshold value adjusting device decreases the second reference value according to a decrease in the internal electromotive force in the fuel cell such that a wait time at which the operation of the fuel cell is started is decreased ~~relatively advanced~~.
8. An electric vehicle comprising:
- a motor that generates power for the vehicle; and
 - a fuel cell system that includes a fuel cell, an electric power storing device, and an electric power supplying device configured to supply ~~for supplying~~ electric power to the motor from the fuel cell and the electric power storing device,
- wherein the electric power supplying device includes an intermittent operation device for stopping configured to stop operation of the fuel cell when a driving power required by the load including the motor is smaller than a reference value, and configured to start ~~starting~~ the stopped operation of the fuel cell when the driving power required by the load is equal to or larger than the reference value,
- wherein the reference value is adjusted by a threshold value adjusting device that is configured to adjust ~~adjusts~~ the reference value according to an internal electromotive voltage of the fuel cell, such that the reference value decreases as the internal electromotive voltage of the fuel cell, when stopped, decreases.

Claim Rejections - 35 USC § 103

6. The claim rejections under 35 U.S.C. 103(a) as being unpatentable over Sugiura et al. (US 2003/0118876) on claims 1-9, 13-15 and 16 are withdrawn as the claims have been amended or cancelled.

Allowable Subject Matter

7. Claims 1-9, 15 and 17 are allowed. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to disclose a fuel cell system comprising: a fuel cell; an electric power storing device; an electric power supplying device configured to supply electric power to a load from the fuel cell and the electric power storing device; and a threshold value adjusting device configured to adjust a reference value according to an internal electromotive voltage of the fuel cell, such that the reference value decreases as the internal electromotive voltage of the fuel cell, when stopped, decreases, wherein the electric power supplying device includes intermittent operation device configured to stop operation of the fuel cell when a driving power required by the load is smaller than the reference value, and configured to start the stopped operation of the fuel cell when the driving power required by the load is equal to or larger than the reference value (independent claim 1). The prior art also fails to disclose an electric vehicle comprising: a motor that generates power for the vehicle; and a fuel cell system that includes a fuel cell, an electric power supplying device configured to supply electric power to the motor from the fuel cell and the electric power storing device, wherein wherein the electric power supplying device includes an intermittent operation device configured to stop operation of the fuel cell when a driving power required by the load

Art Unit: 1795

including the motor is smaller than a reference value, and configured to start the stopped operation of the fuel cell when the driving power required by the load is equal to or larger than the reference value, wherein the reference value is adjusted by a threshold value adjusting device that is configured to adjust the reference value according to an internal electromotive voltage of the fuel cell, such that the reference value decreases as the internal electromotive voltage of the fuel cell, when stopped, decreases (independent claim 8).

The closest prior art of record, Sugiura et al. (US 2003/0118876), discloses similar components; however Sugiura fails to disclose all of the aforementioned limitations. Specifically, Sugiura doesn't teach a threshold value adjusting device configured to adjust a reference value according to an internal electromotive voltage of the fuel cell, such that the reference value decreases as the internal electromotive voltage of the fuel cell, when stopped, decreases. The Examiner updated her search and found no other prior art closer to the claim limitations than Sugiura et al. (US 2003/0118876).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
